

SUMMARY

Student at Newcastle University studying BSc Computer Science from 2024 to 2027, with 5 years' experience in Python developing full-stack web applications with Flask, alongside developing terminal utilities for UNIX / Linux OS's. Proven skills in database management with SQL and NoSQL style databases. 4 years' experience in working with UNIX / Linux, both with user management as well as server management in mind. Passionate about using technology to help people, and to further the use of technology in a way that does not distract people from the world. Open-Source Software enthusiast, enjoying developing new open-source tools and services for anyone to use.

EXPERIENCE

Durham University – October 2024 – Present

Core Banner – May 2026 to Present

Assisting in responding to raised tickets regarding Durham University's Banner database, involving access requests, data entry and correction, as well as SQL development.

- Responding to and raising tickets on UniDesk / TopDesk.
- Working with direct SQL queries on their live environment.

Durham Webspace – December 2025 to May 2026

Mitigated exploitable security threats on sites managed by postgraduate students and staff after an incident found by the security team in which a site was redirected to malware.

- Worked with other colleagues and managed most responsibilities related to site redirects, updates, and contacts.
- Contacted site owners to inform them of issues regarding their websites.
- Helped owners who needed extra assistance whilst fixing their sites.

AI and Collaboration Team – May 2025 to December 2025

Developed and trained an interactive AI chatbot to be given to the university Research and Innovation team to aid them in their work.

- Liaised with colleagues from RIS to understand what their needs are.
- Wrote documentation on the chatbot to be used for training.
- Understood data requirements for the chatbot.

Software Patching Team – October 2024 to May 2025

Worked on a custom-built dashboard in Microsoft PowerApps which pulled vulnerability data from the universities Tenable environment and Nessus agents deployed on all machines to be displayed in a better format, and to allow for tickets to be automatically raised on their TopDesk / UniDesk instance.

- Worked with other team members to deliver a working final product.
- Organised workloads efficiently.
- Became more well-versed in Microsoft Power Platform.

CIS Work Placement – November 2023 to July 2024

Worked throughout the entire University observing all teams related to CIS and technology. This was required work for my college course.

Pasted

Founder and Lead Developer – July 2024 to Present

Pasted is a platform I created to allow users to share log files, code snippets, images, music, or anything they want, quickly and easily. It was created to help solve the problem of users clogging up chat channels on Discord, IRC, etc...
